

To Whom It May Concern,

We are specifically writing this letter to make sure that everyone involved with the rapidly approaching covid-19 “vaccine” clinics, for children ages 12 and up, has all of the available information concerning the dangers of this product. Setting up these clinics at the school is unprecedented. **These products are not FDA approved, they have an emergency use authorization.** This information is essential for people to be able to decide if they want to participate in the trials for this experimental pharmaceutical product. Much of this information is unfortunately lacking from mainstream sources, be it media, medical staff or government officials.

Definition of Informed Consent: agreement or permission to do something from someone who has been given full information about the possible effects or results:

Informed consent is the cornerstone of medical ethics.

Legally, informed consent can be given only by an adult.

From <https://dictionary.cambridge.org/us/dictionary/english/informed-consent>

Please take your time to fully consider the following facts. There are no long term safety studies for children, no data on co-administration of other vaccines, and no benefits for children to take this new “vaccine”.

Risks involved with the covid-19 “vaccine”:

1. The death rate for covid-19 for children under 19 is 0.00003.
2. Asymptomatic individuals do not drive epidemics/pandemics.
3. The trials of this experimental pharmaceutical product will not officially be concluded until 2022/2023
4. These products are not FDA approved, they have an emergency use authorization, which is not the same as FDA approval.
5. Many injuries and deaths have been reported to the Vaccine Adverse Events Reporting System (VAERS) after people received the covid-19 “vaccine”.
6. The manufacturers of the covid-19 “vaccines” all have a long history of criminal behavior.
7. The manufacturers are not liable (you can’t sue them) for any injury caused by the covid-19 “vaccines”.

1. **The death rate for covid-19 for children under 19 is 0.00003.** Children are the demographic at lowest risk.

It is well-accepted that children have a statistically zero chance of dying from COVID. The CDC shows the K-12 mortality rate from or with COVID is .00003.^[1] Any intervention, especially one that is prophylactic, must cause fewer harms to the recipients than the infection. Since children have the lowest death rate from COVID infection, the cost-benefit of administering to children an investigational vaccine with emerging safety issues is especially difficult to justify. Therefore, it is clearly irrational to vaccinate children with a COVID vaccine to protect them from death.

<https://www.cdc.gov/coronavirus/2019-ncov/community/schoolschildcare/k-12-testing.html>

2. **Asymptomatic individuals do not drive epidemics/pandemics.**

Given these facts, an unfounded theory has emerged to use students as pawns who, if vaccinated, could somehow stop transmission to teachers and school staff. However, the data shows: students are *not* asymptomatic carriers, they and teachers have *far lower* rates of COVID diagnosis than the general population, and the vaccine does not prevent person-to-person transmission.

Contrary to popular opinion, asymptomatic transmission is unfounded. Students are not disease reservoirs and are clearly not COVID vectors. The School Response COVID Dashboard shows that students and staff are among the least likely to be diagnosed with COVID. Compared to the positivity rate of 8.1% in the general California population in the most recently available data period (12/13/20), only 0.56% of California students tested positive for COVID, and the staff positivity rate was only 1.46%, even though teachers are daily interacting with students. This

proves it is a significant mistake to assume children are asymptomatic vectors. In fact, in Germany, students are valued as the “brakes” to COVID transmission.

In a 2020 Health & Human Services press conference, Dr. Fauci stated “even if there is some asymptomatic transmission, in all the history of respiratory-borne viruses of any type, asymptomatic transmission has never been the driver of outbreaks. The driver of outbreaks is always a symptomatic person. Even if there’s a rare asymptomatic person that might transmit, **an epidemic is not driven by asymptomatic carriers.**”

A meta-analysis of 54 studies on transmission amongst almost 78,000 participants found that only 0.7% of cases attributed to “household transmission” could have spread from pre-symptomatic or asymptomatic carriers in the household.

Additionally, a study among 10 million residents of Wuhan China demonstrated that *asymptomatic transmission was non-existent*. Among 300 possible carriers, “virus cultures were negative for all asymptomatic positive and re-positive cases, indicating no “viable virus” in positive cases detected in this study. All asymptomatic positive cases, re-positive cases and their close contacts were isolated for at least 2 weeks until the results of nucleic acid testing were negative. None of the detected positive cases or their close contacts became symptomatic or newly confirmed with COVID-19 during the isolation period.”

3. The trials of this experimental pharmaceutical product will not officially be concluded until 2022/2023

Currently, under EUA (Emergency Use Authorization), even if the FDA rushes approval, the earliest the Moderna and Pfizer/BioNTech experimental vaccines could be considered by FDA for full licensure (in adults only) is when the trials are expected to conclude, on October 27, 2022 and January 31, 2023, respectively. Neither Pfizer/BioNTech nor Moderna have completely disclosed everything in their vaccines, nor is full disclosure required by the FDA.

[22] See e.g., *Lorillard Tobacco Co. v. Reilly*, 533 U.S. 525, 570-71 (2001)

4. These products are not FDA approved, they have an emergency use authorization, which is not the same as FDA approval.

Currently, no covid shots are approved or licensed, including Moderna, Pfizer, Johnson and Johnson, AstraZeneca, and 70+ others. Current ones in use are under EUA: Emergency Use Authorization and have specific conditions to adhere to under EUA.

Moderna: On December 18, 2020, the Moderna biological product was issued (EUA) status by the FDA. This is the first product they have ever brought to market. (the FD&C Act or the Act) (21 U.S.C. 360bbb-3). <https://www.fda.gov/media/144636/download>

Pfizer: On December 11, 2020, FDA issued an EUA for the unapproved biological product, Pfizer-BioNTech COVID-19 Vaccine, for active immunization against COVID-19 in individuals 16 years of age and older. (Pfizer fact sheet)

https://www.fda.gov/media/144413/download?fbclid=IwAR00a48tUcKo-owxjGKeTk7y_SOjeryewJEZAVvBLv-3RYIlnTLQFY5WtQ

Johnson and Johnson: Although J&J has never brought a vaccine to market before, on February 27, 2021, the FDA issued an Emergency Use Authorization for use of Johnson and Johnson single dose vaccine.

We are a coalition of organizations, composed of concerned people, who are providing information to others about the dangers of covid-19 "vaccines". We do this so that others will be able to truly give informed consent when deciding to take this product. This is done out of a concern for the health of all. Our organization's mission is to protect children. We will use all legal means necessary to protect the children. Informed consent is essential for every child and parent before deciding to take this product. We assume you will notify parents and students that these shots are not FDA approved, there are inherent risks, and parents have the right to choose without coercion or intimidation. Thank you for your time.
